

BACKUPS

The Original Cyber Security No-Brainer

In this era of rampant cyber threats, adopting a backup strategy is not just a necessity, it's a safeguard. By taking a proactive approach, you ensure the security and immediate availability of vital data for restoration. Here, we offer insights into maintaining the safety and security of your business information.

Protect yourself with these tips:

1

Talk to your corporate IT to make sure that you store your files in a company-approved location.

2

Do not use personal external drives or USB sticks to back up company information.

3

Use Google Drive, iCloud, or a personal Microsoft account to backup your family photos and personal documents.
